

# The Project

## introduction

The Submarine Support Management Group (SSMG) was formed in 1998 to provide Design Authority Support to the Royal Navy's submarine fleet. The Group provides a wide range of services to the Submarine Support Integrated Project Team (SubIPT) under the title Submarine In-Service Support Project.

## organisation

DML, acting as Prime Contractor, is supported by BMT Defence Services and SEA as subcontractors and full risk sharing partners. The teaming arrangement brings together the complementary strengths of DML's extensive experience and knowledge of submarine maintenance and commissioning with the design and combat system experience of BMT Defence Services and SEA.

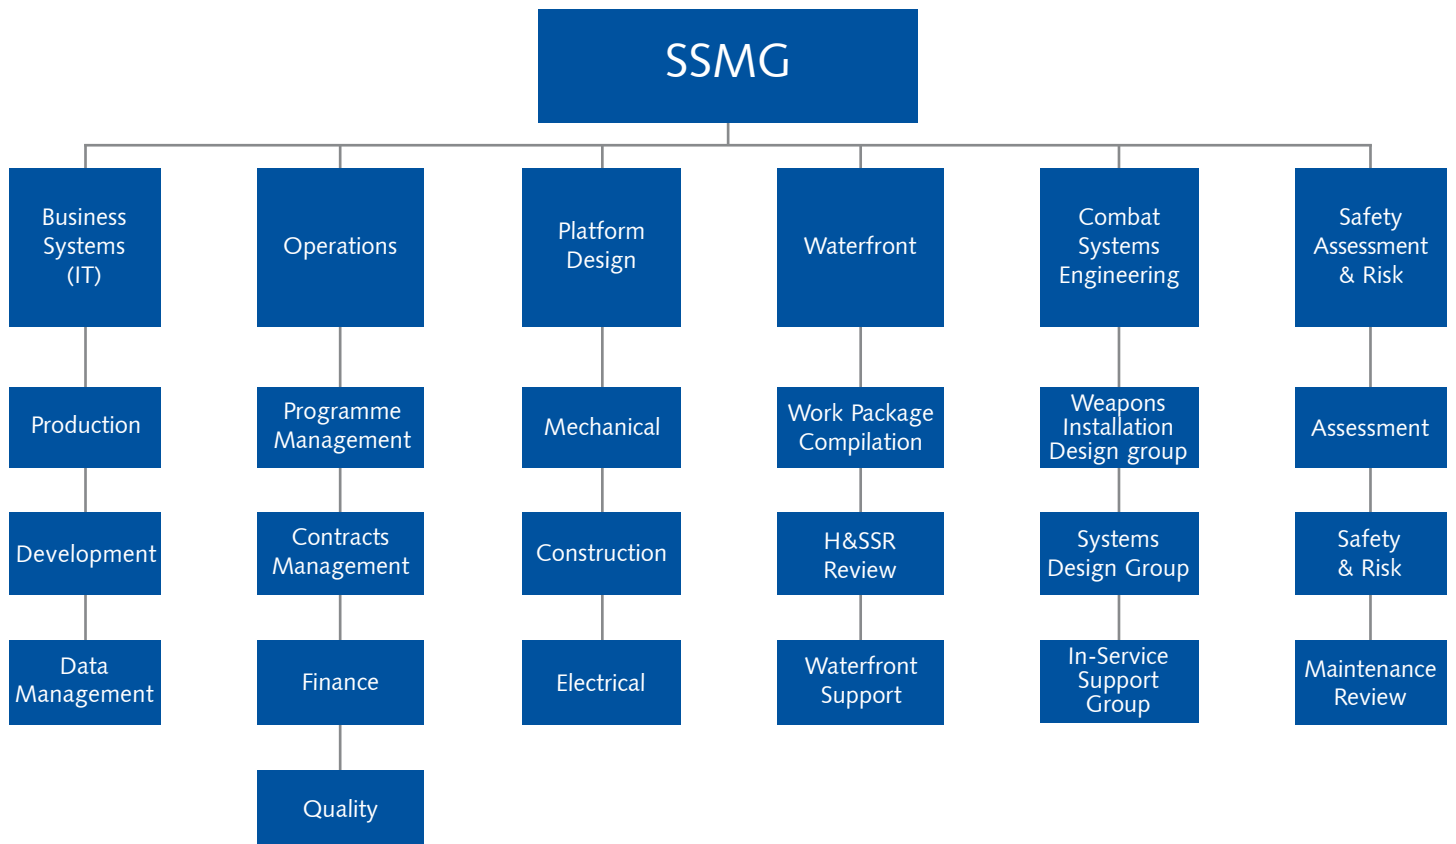

DML, as the owners and operators of Devonport Royal Dockyard, has a long track record in refitting and upgrading nuclear submarines and in recent years has taken a significant role in technical and Prime Contract management. BMT Defence Services has extensive experience in platform and systems design as well as safety management. SEA has a well established reputation for providing independent technical and project management support, with a particular emphasis on high grade combat systems design.

The majority of SSMG personnel are employed in Keynsham, Bristol, with easy access to the main customer bases at Foxhill and Abbey Wood. In addition there are satellite offices at HMNB Clyde at Faslane and at DML Devonport.
